

UTILITY SERIES

- Distinctive styling
- Superior performance
- Ease of maintenance
- Reliability

Common electrical module

At the heart of the Utility Series luminaire family is a common electrical module, designed to simplify maintenance and offer variety in appearance and performance. Luminaires incorporate a plug-in starting aid, plug-in electrical module, terminal block, twistlock photo-control receptacle, and hinged tops for ease of relamping. The tray-mounted module allows the electrical components to be completely replaced by simply unplugging one connector and installing a new module. The original module can then be returned to the maintenance shop for bench testing and repair, thus avoiding costly field diagnosis.

Refractors that control glare

Heat resistant borosilicate glass, acrylic, and polycarbonate refractors are utilized in this series. They are designed to minimize glare and provide precise light control for high efficiency and maximum pole spacing. The Utility Series will accept high pressure sodium, metal halide, or mercury vapor light sources.
